The situation was comparable to the previously mentioned communal planting of the garden of the Kamayurá, Uluku.

Canoes

The standard bark canoe of the upper Xingú was made and used by the Trumaí.[4] Construction was simple and much less time was required to complete it than the typical dugout canoe of the tropical forest. A long, rectangular piece of bark was cut from the *jatobá* tree by men standing on platforms. The bark was then heated over a fire to soften it. The sides were bent up, and the top end of the bark, which narrowed slightly, was made into the bow by bending it upwards. The center of the stern was bent inwards, allowing the whole stern to be well above the water. Leaks were mended with patches of river mud or clay. Propulsion was by paddle, although occasionally poles were used.

There was also one small dugout in the village which belonged to Aloari, Quain's cook and helper. Aloari had been a Yuruna captive, and it was undoubtedly during this experience that he had learned to make this type craft. He also had a bark canoe and was the only Trumaí to own two canoes.

Basketry

The Trumaí men manufactured baskets that were variously shaped and served several purposes. In general, the Trumaí were less skilled in this art than their upper Xingú neighbors. Among the baskets described by Quain was a deep, round tray made of *buriti* fiber and another which was used to store manioc flour and, when equipped with shoulder and forehead tumplines, to carry loads. The latter was an openwork container made of bark strips. A smaller basket of this type was made of *buriti* fibers. The manioc sieve, or *tuafi*, was made of stiff *buriti* fronds and was also used to store small articles. It was made by the women. The women also made a bark cloth bag known as the *tdesnit*, a term that, in addition, designated the female pubic covering.

All of the baskets and similar containers described by Quain were made by other groups of the area, but the art of manufacturing certain varieties was known to only a few Trumaí. Some baskets were obtained in trade.

Textiles

All work in cotton was the exclusive province of the women. Hammocks of both twined and woven types were made. The loom consisted of two upright posts between which a warp of *buriti* fiber was extended.

CHAPTER THREE

Trumaí Social Organization

Property Ownership

105 Trumaí society was relatively simple. There was no social stratification based on wealth, nor were the mechanisms of social control and cohesion highly developed. This was in accord with the individualization of productive effort and the low level of economic surplus. The political unit was a single community, the sole bearer of Trumaí culture.

All land and productive resources were considered the property of the community, and the right to their exploitation resided with any individual willing to expend the labor. Gardens were individual property, but only in the sense that the man who reclaimed the land from the jungle was entitled to its product. There was no concept of alienable property in land, entailing the right of disposition. The *piquí* trees were said to be owned individually, but the owner exercised exclusive rights only over the first fruits. Other wild food plants were community property and their fruits belonged to the gatherer.

The fishing rights to lagoons and backwaters of the rivers belonged to the tribes in whose territory they were located. There was no individual ownership of fishing sites.

There was property in foods, but as soon as they were cooked they were freely distributed. *Beijú* belonged to the women, but the manioc out of which it was prepared was said to be the property of the man who grew it. Such distinctions were largely academic. Actually, the men grew the vegetable and the women harvested it, prepared it, and cooked it, after which it was distributed and eaten. The same situation prevailed in regard to the products of fishing, hunting, and gathering. Salt was the only exception, as it was prepared and owned by individual men and women. The difference undoubtedly lies in the fact that salt was an important trade item, while the other commodities were not.

Very little property can be said to have belonged to the family. Baskets and gourd containers were made by the men for themselves and for the women, but they were often used by both a man and his wife. Nearly all material objects outside of natural resources were owned by the person who made them or the person to whom an object was given. House ownership was vague, since houses were built and occupied by more than one man, and abandoned when the village moved. The house, however, was often considered the property of the man who put
